COUTURE SMILES

>>What's Right for You?

Teens - 20's

Whitening - Keep your smile looking healthy and bright. Whitening is a great solution if you do not have a lot of dental work, especially on front teeth.

Tooth Color Fillings - If you have amalgam (metallic) fillings, consider having them replaced with tooth-colored fillings, which have no danger of mercury leakage. They also look much better than their old metallic counter parts.

Invisalign™ - We call these "braces for adults". This system of custom-made clear plastic aligners straightens teeth into a smile you can feel proud of.

30's - 40's

Veneers - As we mature, teeth can become worn, discolored, cracked, chipped or even broken. Veneers can dramatically improve the appearance of a smile and help us look younger and feel healthier.

Restorations - Over time, dental work can wear away. Ask your dentist to check your crowns and fillings. Consider replacing old metallic dentistry with new tooth-colored materials that contain no mercury and look much better in your mouth.

Invisalign™ - No one over the age of 18 wants to be caught wearing metal braces and wire, that's why we help so many adults with Invisalign. The Invisalign system is comprised of custom-made clear plastic aligners that straighten teeth over time, into a smile you can feel proud of.

50's - 60+

Veneers - Life's experiences can take their toll on our smiles. Medical treatments that heal our bodies can eat away at tooth enamel and take away the luster of a bright, healthy smile. Wearing is also a concern. Veneers can help us look ten years younger, without surgery, dramatically improving the appearance of our smiles and restoring the vibrancy of our teeth.

Restorations - Over time, dental work can wear away along with the surface of our teeth. Make sure to check your crowns and fillings during each dental visit. Consider replacing old metallic dentistry with new tooth-colored materials that contain no mercury and look much better in your mouth.

Implants - Missing teeth is not uncommon. Using state-of-the-art implant techniques, Dr. Sowell can restore the health and function of your teeth, making chewing easy and smiles comfortable again.

WHITER, BRIGHTER, BETTER! >> Dr. Sowell's Smile Tips

- > Floss daily and brush for a minimum of 2 minutes to keep teeth and gums healthy. Power toothbrushes like Sonic Care and Braun are great.
- > Eat your fruits and veggies. Broccoli, cauliflower and apples actually whiten teeth with their fibers.
- > When selecting a dentist, do your homework. If you are considering cosmetic work, find out about the dentist's aesthetic training and experience.

THE MAN Behind the Smile

DR. MARK SOWELL is one of Dallas' most recognized cosmetic dentists and for over 22 years he has created and placed veneers for some of Dallas' most celebrated personalities. His patients adore him and his practice is known for its outstanding service and private, boutique-style surroundings.

The dental experience with Dr. Sowell is focused entirely on the patient and how they want their smile to look.

"A lot of people call us because they want to smile more often and feel better about the way they look," says Dr. Sowell. "It's the right call for them to make. Every day I get to help people become that smiling, confident person they want to be."

Dr. Sowell and his team work one-on-one with each smile patient. Dr. Sowell listens to each patient's smile desires and then custom designs a new smile for that patient. Each patient can see his or her smile before work has even begun because Dr. Sowell uses state-of-the-art dental imaging technology.

"It's like trying before you buy," says Brenna, a recent smile design patient. "I felt so comfortable with Dr. Sowell because he showed me how my smile would look before anything began. Then he reviewed my best tooth color options, shaping ideas, everything with me, so I knew how good my smile would look before my veneering appointment."

The smile design or veneering process can be completed in as few as two appointments. To ensure optimum results, Dr. Sowell and his lab partner have offices next door to each other, unlike other dental practices which often have to mail veneer materials across the country.

"Everything we do is designed to make the smile experience easy and effortless for the patient," says Dr. Sowell. "When our patients return to the office, they're always telling me about the smile compliments they receive or their new found confidence. It shows me that in my office we don't just change smiles, we change lives."
